COLOUR OPTIONS

COLOUR, INSIDE AND OUT

Rockdoors are available in 13 colours so you can choose what's right for you. Each colour features a delicate wood effect grain to make it look like a timber door. As Rockdoors are 'made to order', not 'cut to size', all colours are available inside and out. Please check our colour swatch before ordering or use our door visualizer at Rockdoor.com.

NOT ALL DOORS
ARE MADE EQUAL

SECURITY. IT'S IN OUR DNA

WHY ROCKDOOR IS DIFFERENT

It's important to know what goes on under the surface of a Rockdoor, as this is what makes our door so strong and secure.

Hooks

Sintered steel hooks with a 25mm throw engage into the reinforced outer frame.

S-Glazing

No cassettes giving greater resistance to glass removal, perfect colour match and no air or water leakage. All our glass is toughened as standard or laminated where required.

Engineered Inner Frame

A welded and reinforced door skeleton is impervious to moisture ensuring it won't swell or rot.

Reinforced Frame

Rockdoor's inner frame is reinforced with aluminium making it the strongest door frame on the market.

Cylinder

3 star diamond sold secure cylinders prevent forced attack.

Deadbolt

Secures the door sash to the outer frame acting as part of the multipoint lock.

Made to Measure

All our doors are made to measure and not cut to fit. Standard composite doors are cut to fit which weakens the door overall.

Steel Security Mesh

Make your door 4 times stronger and impossible to cut through with steel security mesh.

Outer Frame

PVC-U multi-chambered, insulated outer frame for high levels of thermal performance and strength.

Steel Keeps

Steel hook locks engage into full length steel keeps preventing forced entry.

Hinges

Engineered 3 way adjustable hinges secured into the reinforced frame for extra strength.

High Impact Door Skins

Thick and tough 3mm PVC-U door skins both internally and externally resist cutting and impacts.

High Density Core

60% stronger than standard composite doors.

Designed to be Secure

Rockdoor meets and exceeds all industry standards. In fact, we achieved Secured by Design accreditation back in 1999.

Secured by Design
To ensure your door is Secured by Design or PAS24 accredited please ask your installer.

STRONG CONSTRUCTION

Unique to Rockdoor

The way a Rockdoor is designed and manufactured differs greatly from timber or GRP foam slabs that are widely available in the market. It's what makes us stand out from the crowd.

Steel Security Mesh

If you are looking for total security, then upgrade to Steel Security Mesh reinforcing which is unique to Rockdoor. The Steel Mesh reinforcing is enclosed in-between the door surfaces to ensure your door will never be cut-through by a burglar, which is becoming an increasingly common form of entry for doors. Choose Steel Mesh reinforcing and you will never need to worry about this. Whilst the door will look no different, you'll have the peace of mind knowing you're protected.

Strong Internal Structure

The inner frame of a Rockdoor is fully reinforced with an Aluminium box section that makes the door super strong. Not only does it ensure the door is fully protected from temperature fluctuations, it allows us to fix all our locking mechanisms and hinges into Aluminium to strengthen the door's performance overall and make forced entry almost impossible for a burglar.

Impossible to Cut Through

Steel Security Mesh within a Rockdoor makes it impossible to cut through. It is similar to the way concrete is reinforced for extra strength. To see how easy it could be for a burglar to get into your house, have a look here www.rockdoor.com/cut-through

S-GLAZE

S-Glaze. Exclusively from Rockdoor

All Rockdoors feature our unique S-Glaze technology. It means the glass is locked into your door for life.

This prevents forced entry through the glass as there is no glazing bead to attack whilst also eliminating draughts through the glazing apertures improving the door's thermal performance.

S-Glaze for Security

Contrary to popular belief, burglars prefer to quietly unclip and remove the glazing panels in front and back doors rather than smash their way through them. And with most composite doors, it only takes them a minute or two as the glass is clipped in.

In Rockdoors, the double glazing is instead part of the door itself. It can't be removed.

BURGLAR PROOF LOCKS

Multipoint Hooks

Our steel hook locks slide into steel keeps that run the full length of the outer frame. It means your Rockdoor can't be forced open.

Deadbolt

The door sash is secured using the steel hooks, and then held in place with a deadbolt that engages into the centre of the door frame for maximum strength.

Gearbox

Although unseen, our multipoint lock gearboxes play an integral part in your door's security. They house our huge hook locks whilst ensuring smooth lock functionality.

In fact, it's so hard to break through a Rockdoor that the Fire Service visited our manufacturing facility for training on how to do so in the rare event of an emergency. To help them during their practice sessions, they used a high tech diamond-tipped power saw which even expert burglars don't carry with them.

For over 20 years we've been investing in the technology needed to build you the toughest, safest and most energy efficient doors available. Our locking systems and reinforced inner frames protect more than half a million UK homes.

Can you really afford to settle for anything less?

70% of burglaries involve forced entry through the front or back door. Back doors in particular are vulnerable as they are often out of sight, so a strong and secure Rockdoor front and back is important.

Secured by Design
To ensure your door is Secured by Design or PAS24 accredited please ask your installer.

DIAMOND SECURE 3 STAR CYLINDERS

Forced Attack

Prevention is the cure to stop forced entry into your home. The cylinders we use are designed to go into 'lock down mode' if the attempt of forced entry is detected keeping you and your property secure.

Snapping

An innovative sacrificial front section is designed to snap away if attacked by an intruder, which in turn shuts down the locking mechanism and prevents access to the inner workings of the lock keeping you safe.

Drilling

You'll have probably never heard of it, but our cylinder features a solid cam which is made of a material called 'Molybdenum'. It's much stronger than steel to ensure your lock can withstand any burglar's attempts to drill through your lock.

It's reassuring to hear and read about 3 star cylinders, multipoint locks, 50mm thickness, reinforced frames, toughened glass, S-Glaze technology and high impact PVC-U skins.

But we know what matters most as you lock up your home is that the only way to get past your Rockdoor is with your key.

That's why Rockdoors come with a 3 star security rating - the best there is.

Our lock cylinders are burglar proof. A TS007 3 star rating (the highest available), SS 312 Sold Secure Diamond Standard and Secured by Design accreditation see to that.

Sold Secure
3 Star Cylinder Master Locksmith Association's highest possible rating - SS312 Sold Secure Diamond status.

ROCKDOOR

THERMAL PERFORMANCE

NOT ALL DOORS ARE MADE EQUAL

70% of burglaries involve forced entry through the front or back door. Back doors in particular are vulnerable as they are often out of sight, so a strong and secure Rockdoor front and back is important.

Thicker Door Sash

With high impact 3mm PVC-U skins, 50mm sash and high density core – Rockdoors can't be cut through.

S-Glaze Technology

S-Glaze doesn't just keep homeowners secure, it stops draughts through the glazing aperture. The glass unit is part of the door itself, not clipped in afterwards, therefore not leaving air leakage gaps.

Thermally Efficient Materials

PVC-U skins, thermally efficient glass, reinforced frames and polyurethane foam work together for the best energy ratings available.

What Else Can We Say?

Like your safety, your energy bills are in good hands.

A combination of material choices such as PVC-U and a 50mm thick high density polyurethane core and unique manufacturing techniques such as S-Glaze Technology, allow Rockdoor to produce good thermal ratings.

With clear backing glass and a low PVC-U threshold most Rockdoors can achieve an A rating for thermal efficiency.

CREATE AN ENTRANCE WITH 3D GLASS

GLASS

Unique and exclusive to Rockdoor, our popular 3D glass designs will create an instant talking point with everyone knocking at your door and give your home real kerb appeal.

CLEAR

(inward or outward) gaps

These designs feature opposite sandblasted effects on the front or rear piece of glass for the ultimate 3D effect.

Styles available with this effect are:

- Vogue Cube (inward effect)
- Vogue Optima (outward effect)
- Vogue Archer (inward effect)
- Vermont Continuity (inward effect)

OBSCURE

The beauty of 3D effect glass, but with a little more privacy. These designs feature a clever use of sandblasted and sandstone glass which work together perfectly to provide stunning effects combined with privacy.

Styles available with this effect are:

- Vogue Haze
- Vogue Shade
- Vermont Haze
- Vermont Shade

OBSCURE BACKING GLASS

Choosing an obscure backing glass in replacement of clear glass will reduce the Door Energy Rating - we recommend all designs featuring Gluechip glass are backed using clear glass to enable us to use a specially coated glass (these designs are indicated with an * between pages 90 – 94). Alternatively, if you would like a different backing glass, the options below are available.

WOODLAND

STAINLESS STEEL FURNITURE OPTIONS

All furniture options on this page are made from marine grade stainless steel. Each door that features stainless steel furniture will come with a cleaning solution to help you maintain the appearance of this natural material.

SWITCH LATCH

Switch Latch allows you to set your lock so the latch can secure the door in place when opening and closing should you wish it to do so (in a similar way to how a split spindle or night latch operates), or alternatively you can set it so it can open and close freely like a roller latch.

Stainless steel bar handles are available in the Dakota, Indiana, Vermont and Vogue. Indiana and Vermont door styles have minimum width size restrictions.

ROCKDOOR

EXTRA SECURITY

Steel Security Mesh (Exclusive to Rockdoor)

You'd be surprised how easy a GRP composite door is to cut through with a Stanley knife to gain entry to your home. As Rockdoors are made from scratch here in the UK, it allows us to put Steel Security Mesh within the door itself where required, making it 4 times stronger and impossible to cut through with a knife.

Laminated Glass

It's very rare for door glass to be smashed due to the noise this would create drawing attention to the intruder. Whilst all our glass is toughened as standard, we do offer customers who feel particularly vulnerable the option to upgrade to laminated glass, often in accordance with Secured by Design (mentioned below). Laminated glass is two pieces of glass with a plastic inner film like a car windscreen.

Secured by Design

Secured by Design is a Police backed initiative that is designed to prevent the risk and fear of crime. It does this by setting out standards that doors manufacturers should achieve. To ensure your door is both PAS24 and Secured by Design, please speak to your installer before ordering.

Rockdoors are designed to be strong and secure, but sometimes where a door is installed in an isolated location where the door could be subjected to a prolonged attack, extra security might be required to provide additional strength to your door.

70% OF BURGLARIES ARE THROUGH A FRONT OR BACK DOOR. BUT, NOT THROUGH A ROCKDOOR.

CERTIFIED FIRE DOOR SETS AND FRAMES

FULLY CERTIFIED FIRE DOORSETS

Doorworks are fully certified for offering fire doorsets. We are one of the few Doorset suppliers in Scotland certified to produce these products. They are supplied fully assembled comprising the door, frame, hinges and seals. Ironmongery and architraves can be added as an extra option. We have a standard specification but these can be altered to suit customer requirements and certification depending on the project.

HINGES

All doorsets are generally factory hung, on Class 13 100mm Ball Bearing Butt hinges. Hinges are supplied as Chrome as Standard. Polished Chrome, Satin Chrome and Brass are also available on request. We can also offer Self Closing spring hinges for FD30 or FD60 doors. If these are required, please request on enquiry.

FRAMES

Our Standard frames are made of a Rebated piece of timber. This can be either Redwood or Hardwood Unfinished, Primed or fully Lacquered. If a loose stop is required, we can also offer this on request.

INTUMESCENT

For doorsets to be compliant to certification, they must include the correct seals. Our Intumescent flipper seal fully complies with this. The 15x4mm Fire and Smoke Seal is routed out to the frame and fitted before delivery. Leaving you with peace of mind!

BESPOKE SERVICES

BOOKMATCHED PAIRS

If you have more than two doors that are used beside each other in the same area, why not get them book matched so they match each other. We can offer this service as a bespoke service with all our Real Wood Veneers.

IRONMONGERY CUT OUTS

Our State of the art CNC machine can cut out any type of Radius Edged Ironmongery required. From Locks to Drop Seals. Sample must be approved before production!

VISION PANELS

We are fully certified to produce vision panels in any door. Pick from our range of Standard designs on page 59 or design your own. From NFR to 60/60 glass, Timber Flush Beads or Stainless Steel Portholes, we can offer them all.
